

MOTO TREKKIN CUSTOM MOLDED EAR PROTECTION

Information Kit

PROTECT YOUR HEARING

Helmet wind noise can permanently damage your hearing with a form of industrial deafness.

We offer hearing protection systems for motorcycle riders, peaceful sleeping, personal applications, industrial applications, shooters, and swimmers.

It's the perfect solution to block out the noise and protect your hearing for the long term.

All of our molded hearing protection products come with the options of basic, single driver (mono), dual driver (surround Stereo, and even bluetooth.

0423 911 719

www.mototrekkin.com.au

Did you know that travelling along at 100km per hour on an open road the wind noise is as loud as 104 decibels?

That amount of noise for a prolonged period of time can cause fatigue, headaches, loss of concentration, ringing in the ears and even long term hearing damage.

There are no second chances with your hearing, once it's gone it's gone forever.

With a pair of Moto Trekkin Custom Molded ear protection in your ears, you will greatly reduce ride noise while protecting your long term hearing – all while still hearing your engine and the exhaust notes.

Each ear mould is moulded to your ears for the perfect fit while you wait. You can choose a basic ear mould, an ear mould with wired speakers or a blue tooth version.

Ear moulds are a brilliant investment to improve ride comfort and to protect your long term hearing.

STANDARD PLUGS

World leading technology with the highest grade premium medical silicone material available that reduces high frequencies but still lets you hear speech without the need of acoustic filters. The process takes minutes and is guaranteed to fit as they are custom made to your ears "ON THE SPOT", no need for impressions, and no waiting weeks to get them back, ready to use the same day.

Comfortable enough to be worn all day and sleep in all night. *Available in 10 solid colours and endless multi-colour combinations*

SINGLE MONO EAR PIECE

Our single sided mono custom earpiece is great for putting sound directly into one ear only so you can still have the other open to the environment around you.

Used widely by security and industry being plugged directly into the hand held mic and placing the radio communication privately to the user and not the crowd around you. Great for race car drivers just starting out to plug into the race comms unit supplied for most race tracks around Australia. *Cable length is 60cm with 3.5mm mono connection*

RECREATIONAL STEREO HEADSET

Widely used by motorcycle riders & recreational users to listen to your favourite tunes or to get clear directions from your GPS or intercom system. Recreational stereo wires are connected to our custom-made silicone Earmold earplugs to make it easy to use without the earpiece falling out or to fit neatly under your motorcycle helmet.

With Optional extension cable to extend the length and an optional microphone cable that turns your stereo head set into a hands free phone unit are also available.

IN-EAR MUSIC MONITORS

These ear moulds are made to slim fit so they won't dislodge while taking your helmet off and on and will stay in place when exercising or moving around so you can use them for various activities such as motorcycling, motor sports, running, cycling, workouts, traveling, meditation, shooting, skiing etc.

SINGLE MICRO DRIVER

Frequency: 11 kHz

Sound Pressure Level: 105.5 dB
